The Wankel Rotary Engine John B. Hege

2015-08-13 Conceived in the 1930s, simplified and successfully tested in the 1950s, the darling of the automotive industry in the early 1970s, then all but abandoned before resurging for a brilliant run as a high-performance powerplant for Mazda, the Wankel rotary engine has long been an object of fascination and more than a little mystery. A remarkably simple design (yet understood by few), it boasts compact size, light weight and nearly vibration-free operation. In the 1960s, German engineer Felix Wankel's invention was beginning to look like a revolution in the making. Though still in need of refinement, it held much promise as a smooth and powerful engine that could fit in smaller spaces than piston engines of similar output. Auto makers lined up for licensing rights to build their own Wankels, and for a time analysts predicted that much of the industry would convert to rotary power. This complete and well-illustrated account traces the full history of the engine and its use in various cars, motorcycles, snowmobiles and other applications. It clearly explains the working of the engine and the technical challenges it presented—the difficulty of designing effective and durable seals, early emissions troubles, high fuel consumption, and others. The work done by several companies to overcome these problems is described in detail, as are the economic and political troubles that nearly killed the rotary in the 1970s, and the prospects for future rotary-powered vehicles.

European Industrial Policy Teaches Economics and Economic History at University of Oxford and Fellow James Foreman-Peck 1999 This book presents a thorough and comparative analysis of industrial policy in 13 European countries, benefiting from the introduction of an historical perspective. With stagnating industrial output, high levels of unemployment and developing integration in Europe, interventionist industrial policies find new popularity after the gentle flirtation with liberalization. This book offers a clear account and assessment of European industrial policies across the 20th century.

Manual of Tests and Criteria United Nations 2020-01-06 The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee

considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

Fiat 131 Abarth Graham Robson 2008-12-15

When Fiat entered rallying in 1970, its ultimate aim was to become World Rally Champion and the 131 Abarth of 1976-1980 provided the machinery to make that possible. It started winning World rallies within months of being launched, and in 1977, 1978 and 1980 the 'works' team also won the World Championship for Makes, and set every standard by which Rally Giants were to be judged. Was there ever any doubt that successors like the Lancia Rally 037 and the Delta Integrale would eventually come from the same stable?

Coventry Climax Racing Engines Des Hammill In the 50s & 60s Coventry Climax engines powered many race-winning cars, including some driven by Stirling Moss & Jack Brabham. To get the true inside story, the author, an engineer, has talked to all surviving Coventry Climax personnel who were involved with the racing engines. The author was given full access to all of Walter Hassan's papers, photographs and engine drawings. After 30 months of original research and writing, this book describes exactly how these famous engines developed from industrial fire pumps to the Hillman Imp, from Le Mans winning Lotus Elites to Formula One winners driven by Stirling Moss and Jack Brabham, right through to the company's takeover by Jaguar in 1963. Viewed through the eyes of an engineer, and the detailed recollections of those who were there, this is a fascinating account of the trials and tribulations of leading edge race engine design from 1952 to 1966.

Alfa Romeo Berlinas John Tipler 2016-03-18

There is something special about Alfa Romeo cars which can't be defined precisely but is, perhaps, best described as a vitality that creates a symbiosis between driver and machine: a oneness that no other marque seems to replicate. Alfa's Berlinas have always tended to be overshadowed by their spotlight-grabbing Coupé and Spider siblings, but enthusiasts with family car needs have always known that any saloon/sedan with the famous Alfa Romeo badge would deliver pure driving pleasure in equal measure. Here is the full story of Alfa's quirky but characterful Berlinas, from their beginnings in the early 1900s through to the start of a new millennium. Not only does the book describe and picture every model, it also contains useful information on restoring classic Alfa Romeos and details of marque specialists.

Containing many previously unseen photographs and interviews with key personalities, this is a vital addition to any Alfa enthusiasts collection.

Automobile Quarterly:Vol-10 #4

Vintage American Road Racing Cars 1950-1969 Harold Pace Mark R. Brinker American road

racing began just after World War II and quickly blossomed into a movement. The Sports Car Club of America (SCCA) and the United States Auto Club (USAC), clubs that became fierce rivals in the 1950s and 1960s, were the principal race promoters. Race tracks popped up everywhere, at first on city streets, then at airports and U.S. Air Force bases, and finally at purpose-built circuits like Road America and Laguna Seca. Although most of the cars that competed in American road racing were built in Europe, an underground movement sprang up of "special builders" who constructed their racers in home garages and small-town machine shops. Some were so homely and slow that only the builders could love them. Others trounced every Ferrari in sight and are now on the wish lists of wealthy collectors the world over. Vintage American Road

Racing Cars 1950-1970 is the first book devoted exclusively to American road racing cars of all types and sizes. Hundreds of race cars built in America have never before been mentioned in print, and this book chronicles those and other cars with vintage and modern photography, specifications, memorabilia, and the stories and characters behind each car. About the Author Harold Pace's writing and photography has appeared in such magazines as Automobile Quarterly, Class & Sportscar, Excellence, Sports Car International, Vintage Racecar Journal, and others. He lives in Weatherford, Texas. Mark Brinker is a vintage race car enthusiast who has raced at the Monterey Historics. He is a doctor with three published medical textbooks and 70+ published scientific papers. He hails from Houston, Texas.
